Education

University of Wisconsin, Madison — Madison, WI

Bachelor of Science in Computer Science & Data Science, Certificate in Entrepreneurship & Business | ***GPA 3.84, Dean's List*** — *May 2026*

Experience

Student Market Research and Strategy Consultant — January 2026 – May 2026

Builty (**builtydata.com**) — *San Francisco, CA (Remote)*

- Built a **100+** company partner and channel strategy matrix across 20 categories to identify distribution channels for an insurance data startup for over **570** carrier clients.
- Conducted primary research through **10+** industry interviews and a **250**-company market segmentation analysis across carriers, reinsurers, MGAs, and brokers to map pain points and prioritize B2B sales targets for a building permit data company

Peer Mentor — August 2025 – May 2026

CS 620 - Computer Sciences Capstone — *Madison, WI*

- Mentored **150+** students across **16-20** industry-sponsored teams designing and implementing full-cycle software products using Agile, Scrum, Kanban, and DevOps practices; guiding them through sprint planning, iteration reviews, and production deployment
- Graded project deliverables and hosted office hours providing feedback on code logic and architecture; facilitated collaboration between student teams and industry partners to ensure professional product execution.

Full Stack Developer Capstone — January 2025 – May 2025

Amazon (shopbop) — *Madison, WI*

- Engineered a swipe-based outfit-matching application end-to-end, building a personalized recommendation engine using Python, and AWS (DynamoDB, EC2) that streamlined outfit discovery and reduced the browsing time for test users by **40%**.
- Built core functionality including user authentication, swipe-based item selection, and dynamic outfit assembly using React.js, Flask, AWS Cognito and DynamoDB, delivering an engaging and responsive UI.

Software Engineering Intern — May 2024 – August 2024

Beyond Key — *Chicago, IL*

- Built and evaluated ML models including K-means clustering, KNN , SVM, and random forest on large real-world datasets, selecting the optimal algorithm through regression analysis and model fitting with scikit-learn.
- Developed a Power App for accounts receivable using Microsoft's Azure Cognitive Services (Vision Stack), gaining hands-on experience with low-code/no-code Power Platform tools and visual guidance techniques.

Software Engineering Intern — May 2023 – August 2023

InfoBeans — *India (remote)*

- Built an account and salary reconciliation robot using UiPath RPA tool, achieving a **100%** salary audit by automatically reconciling payroll data for **1200+** people against HR records.

Projects

Agentic Tool Router | *TypeScript, Python, Bun, Claude API, Vercel AI SDK, React, OAuth*

- Built a general-purpose AI agent that discovers and chains tools at runtime from a catalog of **1,300+**, executing real actions across Gmail, Calendar, Drive, Sheets, and GitHub without hardcoded integrations.
- Engineered a server-side bulk pipeline with batched, **5-way** concurrent LLM extraction that turned **633** GitHub issues and a folder of resume PDFs into Google Sheets in **~20s**, keeping chat-model context flat as the dataset scaled.
- Designed the toolkit system so adding a new integration (Slack, Linear) is a one-line config change; shipped with per-user OAuth and a live view of agent reasoning/tool calls.

Market Pulse | Flask, Python, Claude API, Claude Vision, yFinance, Kalshi, Chart.js

- Built an AI financial terminal fusing **6** live data sources (yFinance, NewsAPI, Kalshi, Polymarket, Google News, Claude) into a single Bayesian probability score across **147** symbols, with Claude Vision parsing uploaded chart screenshots for trend/support/resistance to generate BUY/SELL calls with stop-loss and risk/reward targets.
- Surfaced real-time arbitrage edges across **50** live prediction markets and shipped a context-aware AI chat for follow-up analysis on any loaded ticker.

Big Data Streaming Pipeline | Kafka, Docker, HDFS, gRPC, Protobuf, Parquet, MySQL, Python

- Built a fully Dockerized MySQL → Kafka → HDFS streaming pipeline, serializing live weather data as gRPC protobufs and publishing across a **4-partition** topic for parallel throughput.
- Engineered a manually-assigned consumer with atomic checkpointing to write columnar Parquet files to HDFS, guaranteeing **exactly-once delivery** - the pipeline can be killed mid-stream and resumes with zero duplicate or missing records.

Skills

Languages: Python, Go, Java, JavaScript, TypeScript, SQL, C, C++, R, Bash, Solidity, HTML/CSS, Assembly, LaTeX, Kotlin
Web/App Development: React.js, React Native, Next.js, Flask, TailwindCSS, Node.js, FastAPI, Django, Chainlit, GraphQL, TensorFlow, PyTorch, Scikit-learn, OpenAI, HuggingFace, LangChain, Claude, CrewAI, ChromaDB, LangGraph, Whisper, Prophet, Numpy, Pandas, Excel, APIs, UiPath
Tools & Platforms: Git, JIRA, AWS (EC2, S3, Lambda,DynamoDB), Google Cloud, Firebase, Supabase, Docker, Kubernetes, PostgreSQL, SQLite, MongoDB, pgvector, APScheduler, Datadog, gRPC, Kafka, Cassandra, Spark, Hadoop, Postman, WebSockets, MCP, DigitalOcean, OOP, Linux
Activities: *VP, Badger Product Management Club (Feb 2023 – May 2025); Investment Research Analyst, Finance & Investment Society*
